

Q1. Which of the following is the default database in Django?

Answer: SQLite

Q2. What does the command `python manage.py makemigrations` do?

Answer: It creates migration files for model changes.

Q3. In Django, what is the purpose of `INSTALLED_APPS` in `settings.py`?

Answer: It lists all apps enabled in the project.

Q4. Which Django feature is responsible for handling HTTP requests and responses?

Answer: Views

Q5. The default port for Django development server is?

Answer: 8000

Q6. In Django ORM, `Book.objects.filter(title__contains="Python")` means?

Answer: Find books with title containing Python.

Q7. What does CSRF stand for in Django security?

Answer: Cross-Site Request Forgery.

Q8. Which of the following is NOT a valid field in Django models?

Answer: NumberField

Q9. The `urlpatterns` list in Django `urls.py` contains?

Answer: URL routing patterns.

Q10. Which Django template tag is used for iteration?

Answer: `{% for %}`

Q11. In Django, what is the use of `admin.site.register()`?

Answer: Register models to the admin panel.

Q12. Which command creates a new Django project?

Answer: `django-admin startproject`

Q13. Which file is responsible for WSGI configuration in Django?

Answer: `wsgi.py`

Q14. Django ORM stands for?

Answer: Object Relational Mapping.

Q15. Which Django middleware handles session management?

Answer: `SessionMiddleware`

Q16. Which of the following is true about Django signals?

Answer: They are used for inter-app communication.

Q17. What does the Meta class inside a Django model define?

Answer: Database table name, ordering, and constraints.

Q18. Which of the following is NOT a Django caching backend?

Answer: Redis caching

Q19. Django's template inheritance is achieved using?

Answer: {% extends %}

Q20. What is collectstatic used for?

Answer: Collects all static files into one directory.

Q21. Django REST framework is used for?

Answer: Building APIs.

Q22. Which decorator restricts view access to logged-in users only?

Answer: @login_required

Q23. Which template tag is used for including another HTML file?

Answer: {% include %}

Q24. Which command is used to apply migrations?

Answer: migrate

Q25. Django follows which design pattern?

Answer: MVT (Model-View-Template).

Q26. Which of the following is NOT a valid HTTP method in Django views?

Answer: PULL

Q27. The default session engine in Django stores data in?

Answer: Database

Q28. What is the use of superuser in Django?

Answer: To access and manage the admin panel fully.

Q29. Django's MEDIA_URL is used for?

Answer: Serving user-uploaded files.

Q30. Which of the following handles URL resolution in Django?

Answer: urls.py

Q31. What does blank=True in a Django model field mean?

Answer: Form validation allows the field to be empty.

Q32. Which of these is NOT a template filter in Django?

Answer: replaceall

Q33. The Django ORM method to update a field in bulk is?

Answer: update()

Q34. Which decorator disables CSRF check in Django views?

Answer: @csrf_exempt

Q35. In Flask, which function is used to stop the server programmatically?

Answer: shutdown()

Q36. Which Django ORM function is used to fetch objects or raise a 404 error if not found?

Answer: get_object_or_404()

Q37. In SQL, what does the HAVING clause do?

Answer: Filters groups after aggregation.

Q38. Flask's g object is mainly used for?

Answer: Temporary storage during a request.

Q39. In Django, which method is used to hash user passwords securely?

Answer: make_password()

Q40. In SQL, which type of join returns only matching rows from both tables?

Answer: INNER JOIN

Q41. What is the default primary key type in Django models?

Answer: AutoField

Q42. In Flask, the @app.after_request decorator is executed?

Answer: After the request but before the response is sent.

Q43. In SQL, which keyword is used to prevent duplicate rows in query results?

Answer: DISTINCT

Q44. Django's collectstatic command is used for?

Answer: Collecting static files into one location.

Q45. Which Flask extension is used for handling SQLAlchemy integration?

Answer: Flask-SQLAlchemy

Q46. In SQL, which normal form eliminates transitive dependencies?

Answer: 3NF

Q47. In Django, which setting is used to define multiple database configurations?

Answer: DATABASES

Q48. In Flask, the function `url_for('index')` returns?

Answer: The URL for the index endpoint.

Q49. Which SQL keyword is used to rename a column in the result set?

Answer: AS

Q50. In Django, `QuerySet.exists()` returns?

Answer: A boolean indicating if results exist.

Q51. In Flask, which HTTP method is idempotent by definition?

Answer: GET

Q52. In SQL, which type of constraint ensures that values in a column are unique but allows NULLs?

Answer: UNIQUE

Q53. Django signals are primarily used for?

Answer: Triggering actions on events.

Q54. In Flask, sessions are signed by default using?

Answer: A secret key

Q55. Which SQL keyword is used to sort results?

Answer: ORDER BY

Q56. In Django, which method deletes all objects in a `QuerySet` at once?

Answer: `delete()`

Q57. In Flask, which extension is commonly used for form handling and CSRF protection?

Answer: Flask-WTF

Q58. SQL TRUNCATE differs from DELETE because?

Answer: TRUNCATE resets auto-increment counters.

Q59. Django's `select_related` is mainly used for?

Answer: Optimizing foreign key queries.

Q60. In Flask, which object stores request-specific data?

Answer: `request`

Q61. In Django, `on_delete=models.CASCADE` means?

Answer: Deletes child when parent is deleted.

Q62. In Flask, `@app.before_request` is executed?

Answer: Before every request.

Q63. In Django ORM, which method is used to check if a record exists?

Answer: `exists()`

Q64. In Flask, to return JSON response easily, which helper is used?

Answer: `jsonify()`

Q65. In Django, which field is automatically added to models unless specified otherwise?

Answer: `id` (primary key)

Q66. Which Flask extension helps in database integration?

Answer: Flask-SQLAlchemy

Q67. In Django, `prefetch_related()` is mainly used for?

Answer: Optimizing reverse relationships.

Q68. Which command creates a superuser in Django?

Answer: `python manage.py createsuperuser`

Q69. In Flask, the default debug mode is?

Answer: Off

Q70. In Django ORM, `.update()` is executed at the?

Answer: SQL level

Q71. In Flask, `@app.after_request` is executed?

Answer: After the response is generated.

Q72. In Django, which setting stores static file references?

Answer: `STATIC_URL`

Q73. In Flask, which command runs the server in production mode?

Answer: `flask run`

Q74. In Django, which field type is used to store True/False values?

Answer: `BooleanField`

Q75. In Flask, session data is stored by default in?

Answer: Cookies

Q76. In Django, what does python manage.py migrate do?

Answer: Applies database schema changes.

Q77. In Flask, to register multiple routes for one function, you use?

Answer: Multiple @app.route decorators

Q78. In Django, which method is used to delete objects from QuerySet?

Answer: delete()

Q79. In Flask, which command is used to initialize the application from CLI?

Answer: flask run

Q80. In Django, python manage.py collectstatic is used for?

Answer: Collecting static files into one location.

Q81. In Flask, which decorator handles URL parameters like /user/?

Answer: app.route()

Q82. In Django, which template tag is used for inheritance?

Answer: {% extends %}

Q83. In Flask, default HTTP method allowed by routes is?

Answer: GET

Q84. In Django, which file contains database configuration?

Answer: settings.py

Q85. In Flask, which object stores request data?

Answer: request

Q86. In Django, which method creates and saves a new object in ORM?

Answer: create()

Q87. In Flask, which HTTP method is commonly used for form submissions?

Answer: POST

Q88. In Django, which option is used to limit results from QuerySet?

Answer: Slice notation

Q89. In Flask, error handling is done using?

Answer: @app.errorhandler()

Q90. In Django, which command shows all migrations and their status?

Answer: showmigrations

Q91. In Flask, which library is required for template rendering?

Answer: Jinja2

Q92. In Django ORM, which method is used to return only selected fields?

Answer: values()

Q93. In Flask, app.secret_key is used for?

Answer: Securing sessions and cookies.

Q94. In Django, which setting specifies allowed domains?

Answer: ALLOWED_HOSTS

Q95. In Flask, which status code represents "Not Found"?

Answer: 404

Q96. In Django ORM, .count() returns?

Answer: Number of rows in database.

Q97. In Flask, which function is used to redirect users?

Answer: redirect()

Q98. In Flask, which method is used to shut down the application programmatically?

Answer: shutdown()

Q99. In Django, which option enables debugging?

Answer: DEBUG = True

Q100. In Flask, url_for() is used to?

Answer: Generate dynamic URLs.
